Profile

Final-year Software Engineering student with solid expertise in software architecture, modular system design, and API integration. Experienced building interoperable, event-driven systems and adapter-based integrations across heterogeneous components. Eager to apply rigorous software engineering methods in a research-oriented environment and take on new intellectual challenges.

Education

• Engineering Degree in Software Engineering	<i>In progress</i>
<i>Higher Institute of Multimedia Arts of Manouba (ISAMM), Tunisia</i>	2023 – Present
• Bachelor’s Degree in Computer Science	<i>Obtained</i>
<i>Higher Institute of Multimedia Arts of Manouba (ISAMM), Tunisia</i>	2020 – 2023
• Scientific Baccalaureate – Experimental Sciences	<i>Obtained</i>
<i>Menzah 6 High School, Ariana, Tunisia</i>	2020

Professional Experience

• Software Engineering Intern – AXE FINANCE	<i>Tunisia</i>
<i>ACP End-to-End Configuration Portal</i>	2026
– Designed a modular plugin-based system enabling integration of external tools without modifying the core codebase – directly applicable to model adapter design.	
– Implemented event-driven architecture (Apache Kafka, Dapr) for automated end-to-end workflows across heterogeneous components.	
– Built REST APIs for dynamic task lifecycle management with role-based access control (Keycloak, RBAC).	
– Integrated concepts of auditability, traceability and process control across complex multi-component workflows.	
– <i>Technologies: .NET, Angular, Keycloak, Apache Kafka, Dapr.</i>	
• Software Engineering Intern – Liberrex Startup	<i>Tunisia</i>
<i>Kitchen Display System (KDS)</i>	June – July 2025
– Developed real-time backend logic and dashboard; handled data flow coordination between system components.	
– <i>Technologies: Python (Flask), Vue.js.</i>	
• Software Engineering Intern – Express Display	<i>Tunisia</i>
<i>Open-Source Application Integration</i>	June – July 2024
– Customized and integrated an open-source application into an existing system without altering its source code – experience in adapter-based integration .	
– <i>Technologies: PHP, MySQL, JavaScript.</i>	

Selected Projects

• Intelligent Financial Management Assistant
<i>Django, React, RAG, LLM integration</i>
– Designed REST APIs for structured financial data processing and implemented RAG-based LLM integration for intelligent data retrieval and recommendations.
– Focused on clean API design, separation of concerns, and structured data management across heterogeneous sources.
• Smart Greenhouse – Connected Embedded IoT System
<i>ESP32, MQTT, Firebase, Flutter, ESP32-CAM</i>
– Designed a multi-component heterogeneous system coupling sensors, actuators, real-time vision (ESP32-CAM), and a mobile interface.
– Built a real-time distributed architecture (MQTT + Firebase) with automated decision logic from multi-source data – experience with heterogeneous data flows and system coupling.
• Backend Refactoring – Large-Scale Application
<i>.NET Core, SOLID principles, Design Patterns</i>
– Refactored a legacy backend by applying SOLID principles and design patterns to improve modularity, maintainability and extensibility of a complex system.

Technical Skills

Software Architecture: SOLID principles, Design Patterns, Plugin-based & modular systems, Event-driven architecture
Backend & APIs: .NET Core, Django, Node.js (Express), Flask – REST API design and integration
Data & Databases: MySQL, MongoDB, query optimization
AI & Data: RAG architecture, LLM integration, basic Machine Learning
DevOps & Tools: Docker, CI/CD, Apache Kafka, Dapr, Git
Other: IoT systems (MQTT, ESP32), Flutter/Dart, Android Native

Certifications

CCNA: Switching, Routing, and Wireless Essentials – SRWE (Cisco)	Flutter & Dart – The Complete Guide 2025 (Udemy)
Professional Skills Development – INJAZ Tunisia	

Languages

Arabic: Native	French: Advanced	English: Advanced
